

SNACK - MAN

the mobile carrying device

the mobile carrying device for bakery products, sandwiches and many more.

Throughout the isolated chambers it also could be used for ice cream. The Snack-Man was developed for mobile vending of food stuff. In combination with the Vario3 a team of two persons could offer a complete breakfast – a hot coffee and some bakery products. The first runner (Snack-Man) contacts the customer and does the financing part, the second one (Drink-Man Vario3) hands out the desired food and beverage.

Naturally the Snack-Man comes with the Quick-Change-System and the X1 harness. So it can be combined with all other systems of the Drink-Man range.

technical data's:

<p>Carrying device:</p>	<p>X1-system is the name for Tatonka's new High End-carrying device - specialised for high performance backpack. The X1-system was especially developed for heavy loads in the military. The X1-system means a high level of wearing comfort at all times. The ergonomically shaped, X-curved aluminium-profiles transmit (a) parts of the load to the extra padded hip strap. Result: Well-balanced distribution of the load for a high level carrying comfort. 7 height adjustments, 2 distant straps and direct adjustments for shoulders and hips ensure perfect fitting against the body.</p>
<p>Drawers:</p>	<p>The drawers are made of EPP RG60, which combines light-weight with ideal insulating characteristics. Looks like polystyrene, but is foamed polypropylen which is almost unbreakable and resistant to abrasion. Easy to clean with regular cleaners and easy to exchange if necessary.</p>
<p>Advertising:</p>	<p>The area of the Snack-Man is divided in 10 segments. Drafts are exactly divided after a cut pattern. The segments can be glued on the drawers.</p>
